

The ultimate solution for practically any flat roof!

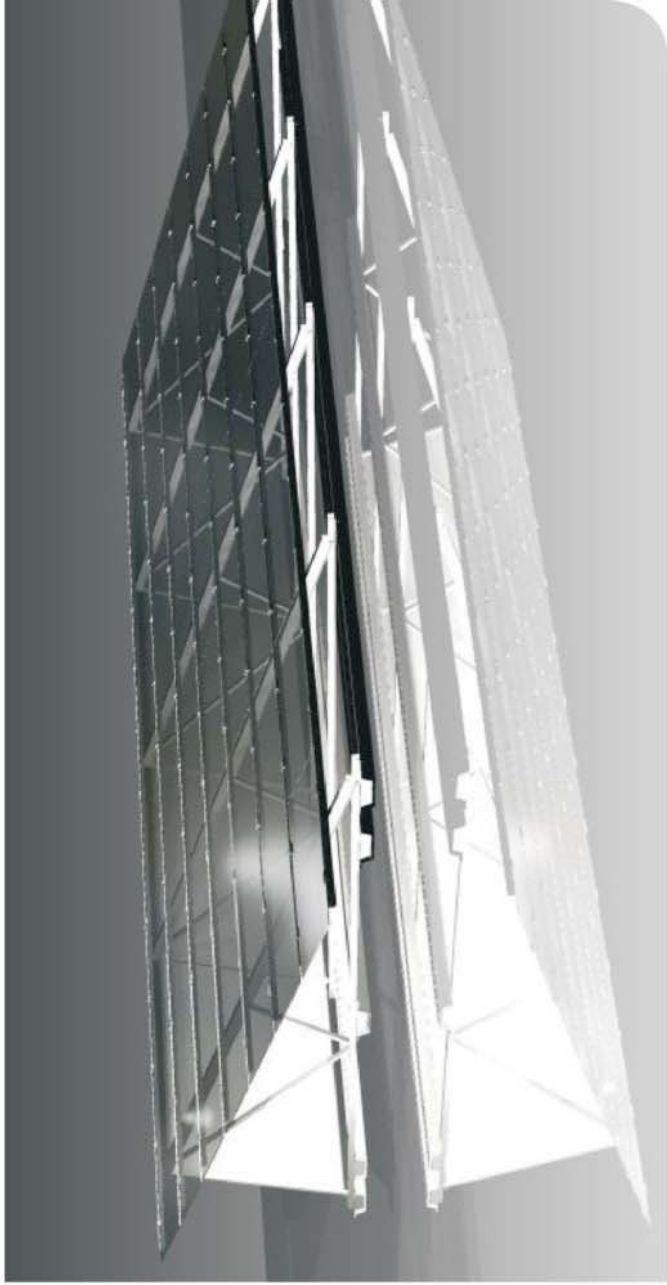

- Modular construction
- Minimal ballasting needed!
- 10 year guarantee as on all Schletter systems
- Pre-assembled delivery
- All components made of high-grade stainless steel or aluminium

The **Schletter-FR-WindSafe** system is the solution for flat roofs that allow only minimal extra loads. The modular system features a proved stability of the PV-system needing a lot less extra weight as ballast than conventional constructions. A special windblocker in the back of the rack reduces wind loads striking the construction. The modularity of the system and the combination possibilities of different anchoring methods, module clamps and profiles, offer a wide range of applications. The design matching of the single parts and the most possible degree of **pre-assembly**, guarantee a short mounting time to save labor costs

Technical specifications

Material	Supports and wind blocker aluminium, fastening elements VA 1.4301
Statics	Schletter system statics, after DIN 1055, part I, part IV, part V and Ec1
Application	For flat roof plants with weights as fastening method
